

Forestland Classification Project Definitions

Forestland, as defined by ORS Chapter 477.001, means any woodland, brushland, timberland, grazing land or clearing that, during any time of the year, contains enough forest growth, slashing or vegetation to constitute, in the judgment of the forester, a fire hazard, regardless of how the land is zoned or taxed. As used in this subsection, “clearing” means any grassland, improved area, lake, meadow, mechanically or manually cleared area, road, rocky area, stream or other similar forestland

opening that is surrounded by or contiguous to forestland and that has been included in areas classified as forestland under ORS 526.305 TO 526.370.

The Wildland-Urban Interface (WUI) is commonly described as the zone where structures and other human development meet and intermingle with undeveloped wildland or vegetative fuels. This WUI zone poses tremendous risks to life, property, and infrastructure in associated communities and is one of the most dangerous and complicated situations firefighters face.
